

## **Matt Scully, Director of Product Management**

Matt Scully is an expert and thought leader in service provider and enterprise network engineering and architecture, advanced technology research and evaluation, large scale program management, information security, and access technologies. He joined Dejero in 2020 as Director of Product Management at Dejero leading the development of technologies that support mission-critical networks, 911 emergency services, mobile communication systems and enterprise networks worldwide.

Matt's experience spans nearly three decades evaluating, designing, building and operating networks around the world, including U.S. Civilian and Defense department networks, the first European Union optical network, multiple metropolitan police, fire, hospital and government networks, university campus and fortune 500 enterprises. A critical area of his expertise includes the design and implementation of broadband access networks and wide area networks supporting customer access.

Innovation is part of Matt's DNA. He has extensive experience developing technology plans that have enabled cable, EPON and wireless access to over 55 million homes, including new plant construction and the retrofit of existing legacy infrastructure. He spent three years in outside plant construction learning to incorporate the physical, financial and regulatory challenges of the physical fiber and cables that are the basis of the world's network infrastructure.
